

This is Multibrackets Stockholm, Sweden

We like turns from right to left.
We think that many remotes are a nuisance.

Introducing the motorized table stand that works with your regular remote control.

M Motorized Tablestand

Turn your TV left or right with your TV remote with the Multibrackets Motorized Tablestand.

Suddenly your table stand keeps up with all the new features that are integrated into the new generation of Smart TV. Its unobtrusive design and unique functionality makes it a perfect partner to your LCD or LED TV.

Multibrackets Motorized Tablestand has a Nordic clean design and a built-in motor that allows great flexibility, but the motorized parts are discreetly hidden inside the stand itself. This makes the motorized stand not larger than any other stand. Simply turn your TV up to 30 degrees, left or right.

Watch TV at any optimal angle from your living room couch, kitchen table or other location. As long as you have your TV remote handy, you control your TV's position wherever you are.

Works with your regular remote control

The built-in IR eye in the base table is compatible with your standard TV remote control. Press the left arrow and TV turns left, press the right arrow, and TV turns right, as easy as it can be. When you turn off the TV you can let your TV go back to its original position, so the TV is always ready to be used in its original position.

Two sizes

The table stand is available in two sizes, medium and large. Medium manages TVs up to 46" and large version is capable of TVs up to 60".

Reliability

The table stand motor is designed to give many thousands of hours of engine operation. This makes the stands reliable and powerful. Still, this engine is very quiet and provides a low buzzing sound when used.

USE YOUR OWN REMOTE
